

Type of Event: Webinar

Date: April 16, 2015

Venue: Online event

Description:

The sustainability of agriculture insurance programmes relies primarily on reaching scale and controlling the costs of distribution. With this in mind, insurers are designing meso-level insurance policies that cover the entire portfolio of an aggregator. But while there are promising gains, there is still much to learn from implementing these solutions to achieve scale and efficiency.

Jointly organized by the Global Index Insurance Facility and the ILO's Impact Insurance Facility, this webinar discussed opportunities and challenges in meso-level distribution. It presented diverse viewpoints on aggregate distribution and portfolio covers and the roles of various stakeholders. It highlighted experiences of scaling up and how such initiatives impact customer understanding and client value.
